INTERNAL — DISCOVERY REPORT

Executive Summary

Live Discovery Report — azlocal-iic-01

Mode: current-state | Ranger Version: 1.6.0 | Generated: 04/06/2026 12:08:32

- Overall Health
- Azure Integration
- Security Posture
- Monitoring Coverage

Storage used:	0%
Storage reserve:	0%
Safe allocatable:	0%
Monitoring coverage:	100%
Backup coverage:	20%

Table of Contents

- Run Summary
- Readiness Snapshot
- Health Status
- Environment Overview
- Topology and Operating Model
- Domain Coverage
- Operational Risk Summary
- Workload Summary
- Capacity Summary

Priority Recommendations

- **[WARNING]** One or more node certificates expire within 90 days
  Review certificate ownership and renew expiring node certificates before handoff.
- **[WARNING]** iDRAC firmware below recommended baseline on all nodes
  Update iDRAC firmware via Dell OME or Lifecycle Controller during next maintenance window.

Run Summary

- Mode: current-state
- Generated: 04/06/2026 12:08:32
- Cluster: azlocal-iic-01
- Nodes: 3
- Collectors: 7/7 successful
- Artifacts currently recorded: 0

Readiness Snapshot

- Schema validation: passed
- Critical findings: 0
- Warning findings: 2
- Informational findings: 2
- Successful collectors: 7 of 7
- Partial or failed collectors: 0

Health Status

- Overall health: GREEN (critical, warning findings)
- Azure integration: GREEN (10 Azure resources discovered)
- Security posture: GRAY (Secured-Core enabled on node(s))
- Monitoring coverage: GREEN (100% of nodes have Azure Monitor Agent)

Environment Overview

- VMs discovered: 5
- Azure resources discovered: 10
- Connected Azure auth method: service-principal
- Monitoring resources: 5
- Management services running: 4

Topology and Operating Model

- Deployment type: hyperconverged
- Identity mode: ad
- Connectivity mode: connected
- Storage architecture: storage-spaces-direct
- Network architecture: switched
- Variant markers: connected

Domain Coverage

- Cluster nodes: 3
- Cluster roles: 5
- Storage pools: 1
- Physical disks: 24
- Network adapters: 12
- VMs discovered: 5
- Azure resources: 10
- Alerting resources: 2
- Management services: 4

Operational Risk Summary

- Nodes not healthy: 0
- Unhealthy disks: 0
- High CPU nodes: 0
- Certificates expiring within 90 days: 1
- Azure Policy assignments: 2
- Schema warnings: 0
- Azure Advisor recommendations: total, 3 high-impact

Workload Summary

- Total VMs: 5
- Total nodes: 3
- AKS clusters: 1
- Arc-connected machines: 1
- Update compliance: No update resources tracked
- Licensing: Not collected
- VMs using Arc IP fallback: Not collected

Capacity Summary

- Storage total raw: 0 TiB
- Storage total usable: 0 TiB
- Storage used by workloads: 0 TiB (0% of usable)
- Storage reserve target: 0 TiB (0% of usable)
- Storage free usable: 0 TiB
- Projected safe allocatable: 0 TiB
- Thin provisioning ratio: Not computed
- vCPU:pCPU overcommit ratio: Not computed
- Memory overcommit ratio: Not computed
- Average VMs per node: N/A

Findings

WARNING **One or more node certificates expire within 90 days**

Identity posture data indicates certificate on azl-iic-n01 expires within 90 days.

Current state: 1 certificate expiring within 90 days

Recommendation: Review certificate ownership and renew expiring node certificates before handoff.

WARNING **iDRAC firmware below recommended baseline on all nodes**

OEM integration data shows iDRAC firmware at 7.10.30.00. The recommended baseline is 7.20 or later.

Current state: iDRAC firmware 7.10.30.00

Recommendation: Update iDRAC firmware via Dell OME or Lifecycle Controller during next maintenance window.
