INTERNAL — DISCOVERY REPORT

Management Summary

Live Discovery Report — azlocal-iic-01

Mode: current-state | Ranger Version: 1.6.0 | Generated: 04/06/2026 12:08:32

- Overall Health
- Azure Integration
- Security Posture
- Monitoring Coverage

Storage used:	0%
Storage reserve:	0%
Safe allocatable:	0%
Monitoring coverage:	100%
Backup coverage:	20%

Table of Contents

- Run Summary
- Readiness Snapshot
- Health Status
- Environment Overview
- Topology and Operating Model
- Domain Coverage
- Node Inventory
- Collector Status
- Operational Risk Summary
- Workload Summary
- Capacity Summary
- Priority Recommendations
- VM Inventory
- VM Density Metrics
- Storage Pool Capacity
- ESU Enrollment
- Coverage Assessment
- Security Posture Summary
- Management Tool Coverage
- WAF Assessment — Scorecard
- WAF Assessment — Azure Advisor Recommendations

Priority Recommendations

- **[WARNING]** One or more node certificates expire within 90 days
  Review certificate ownership and renew expiring node certificates before handoff.
- **[WARNING]** iDRAC firmware below recommended baseline on all nodes
  Update iDRAC firmware via Dell OME or Lifecycle Controller during next maintenance window.
- **[INFORMATIONAL]** Azure Policy assignments discovered at resource group scope
  Verify policy scope extends to arc resource group and monitor for compliance drift.
- **[INFORMATIONAL]** Cluster event history includes a transient network quorum warning
  Review switch port configuration to confirm management NICs are on dedicated VLANs and bonded correctly.

Run Summary

- Mode: current-state
- Generated: 04/06/2026 12:08:32
- Cluster: azlocal-iic-01
- Nodes: 3
- Collectors: 7/7 successful
- Artifacts currently recorded: 0

Readiness Snapshot

- Schema validation: passed
- Critical findings: 0
- Warning findings: 2
- Informational findings: 2
- Successful collectors: 7 of 7
- Partial or failed collectors: 0

Health Status

- Overall health: GREEN (critical, warning findings)
- Azure integration: GREEN (10 Azure resources discovered)
- Security posture: GRAY (Secured-Core enabled on node(s))
- Monitoring coverage: GREEN (100% of nodes have Azure Monitor Agent)

Environment Overview

- VMs discovered: 5
- Azure resources discovered: 10
- Connected Azure auth method: service-principal
- Monitoring resources: 5
- Management services running: 4

Topology and Operating Model

- Deployment type: hyperconverged
- Identity mode: ad
- Connectivity mode: connected
- Storage architecture: storage-spaces-direct
- Network architecture: switched
- Variant markers: connected

Domain Coverage

- Cluster nodes: 3
- Cluster roles: 5
- Storage pools: 1
- Physical disks: 24
- Network adapters: 12
- VMs discovered: 5
- Azure resources: 10
- Alerting resources: 2
- Management services: 4

Collector Status

- hardware: success ()
- management-performance: success ()
- monitoring-observability: success ()
- storage-networking: success ()
- topology-cluster: success ()
- waf-assessment: success ()
- workload-identity-azure: success ()

Operational Risk Summary

- Nodes not healthy: 0
- Unhealthy disks: 0
- High CPU nodes: 0
- Certificates expiring within 90 days: 1
- Azure Policy assignments: 2
- Schema warnings: 0
- Azure Advisor recommendations: total, 3 high-impact

Workload Summary

- Total VMs: 5
- Total nodes: 3
- AKS clusters: 1
- Arc-connected machines: 1
- Update compliance: No update resources tracked
- Licensing: Not collected
- VMs using Arc IP fallback: Not collected

Capacity Summary

- Storage total raw: 0 TiB
- Storage total usable: 0 TiB
- Storage used by workloads: 0 TiB (0% of usable)
- Storage reserve target: 0 TiB (0% of usable)
- Storage free usable: 0 TiB
- Projected safe allocatable: 0 TiB
- Thin provisioning ratio: Not computed
- vCPU:pCPU overcommit ratio: Not computed
- Memory overcommit ratio: Not computed
- Average VMs per node: N/A

Priority Recommendations

- [WARNING] One or more node certificates expire within 90 days: Review certificate ownership and renew expiring node certificates before handoff.
- [WARNING] iDRAC firmware below recommended baseline on all nodes: Update iDRAC firmware via Dell OME or Lifecycle Controller during next maintenance window.
- [INFORMATIONAL] Azure Policy assignments discovered at resource group scope: Verify policy scope extends to arc resource group and monitor for compliance drift.
- [INFORMATIONAL] Cluster event history includes a transient network quorum warning: Review switch port configuration to confirm management NICs are on dedicated VLANs and bonded correctly.

VM Density Metrics

- VMs per node (average): N/A
- Highest-density node: N/A
- vCPU:pCPU overcommit ratio: Not computed
- Memory overcommit ratio: Not computed
- Arc-connected VMs:
- VMs using Arc IP fallback:
- Avg CPU utilization (all nodes): 38.3%
- Avg available memory (all nodes): 176 GiB

Storage Pool Capacity

Pool	Raw (GiB)	Usable (GiB)	Used (GiB)	Reserve (GiB)	Safe Alloc (GiB)	Posture
—						
0						
0						
0						
0						
0						
—						

ESU Enrollment

- Eligible Arc-connected VMs:
- Enrolled in ESU:
- Not enrolled in ESU:
- Ineligible:
-

Coverage Assessment

- Monitoring coverage (AMA): 100% (3 of 3 nodes have Azure Monitor Agent)
- Backup coverage estimate: 20% (based on backup items vs VM count)
- Defender for Cloud: Not confirmed or not collected
- WDAC policy: Not collected
- BitLocker status: Not collected
- Certificates expiring in <90 days: 1

Security Posture Summary

- Secured-Core enabled nodes: of 3
- Syslog forwarding nodes:
- RBAC assignments at resource group: 1
- Policy assignments tracked: 2
- Policy exemptions:
- Active Directory site: Not collected

Management Tool Coverage

- WAC installed nodes: of 3
- SCVMM agent nodes:
- SCOM agent nodes:
- Running management services: 4
- Third-party agent types: (0)

WAF Assessment — Scorecard

Pillar	Score	Status	Rules Passing	Top Finding
Reliability				
0%				
At Risk				
4 / 6				
Cluster quorum is configured				
Security				
0%				
At Risk				
1 / 6				
Secured-Core is enabled on cluster nodes				
Cost Optimization				
0%				
At Risk				
1 / 2				
ESU-eligible VMs are enrolled in Extended Security Updates				
Operational Excellence				
0%				
At Risk				
2 / 6

Findings

WARNING **One or more node certificates expire within 90 days**

Identity posture data indicates certificate on azl-iic-n01 expires within 90 days.

Current state: 1 certificate expiring within 90 days

Recommendation: Review certificate ownership and renew expiring node certificates before handoff.

WARNING **iDRAC firmware below recommended baseline on all nodes**

OEM integration data shows iDRAC firmware at 7.10.30.00. The recommended baseline is 7.20 or later.

Current state: iDRAC firmware 7.10.30.00

Recommendation: Update iDRAC firmware via Dell OME or Lifecycle Controller during next maintenance window.

INFORMATIONAL **Azure Policy assignments discovered at resource group scope**

2 policy assignments are enforcing tagging and security control auditing.

Current state: 2 policy assignments active

Recommendation: Verify policy scope extends to arc resource group and monitor for compliance drift.

INFORMATIONAL **Cluster event history includes a transient network quorum warning**

A Management network quorum warning event was recorded on 2026-04-06. Cluster recovered automatically.

Current state: single event logged; cluster healthy

Recommendation: Review switch port configuration to confirm management NICs are on dedicated VLANs and bonded correctly.
